

PRODUCT DATA SHEET

Product Name: Mould Gone Natural Surface Wipes
Pack Size: 100 Wipes
SKU: 630-046

Description:

A soft yet sturdy compostable bamboo wipe. Contains no alcohol.

SAN-AIR™ is a Microbial Control Technology, independently validated to reduce fungal & bacterial bio-burden levels within indoor environments. Formulated with over 20 plant actives, SAN-AIR is 100% safe for humans, animals & the environment. A scientific breakthrough in natural organic chemistry.

Created through extensive research and development, the technology capitalises on the relationship between nature and science to effectively neutralise and control airborne and surface contamination without the use of toxic chemicals.

Natural air and surface purification

An average person spends almost 90% of their time indoors. High levels of indoor bio-burden have been linked to many severe health conditions. SAN-AIR decreases the indoor bio-burden to levels well below current Australian standards for indoor air:

- Less than 150 colonies of mould per 1000L
- Less than 1000 colonies of bacteria per 1000L

Applications:

- Mould remediation.
- Also great for general cleaning on all surfaces such as benches, cupboards, walls & ceilings.
- Interiors of cars, caravans & motorhomes
- Refrigerators & cold storage rooms
- Safe to use on most surfaces: plastic, timber, canvas, leather, vinyl, fabric, tiles, laminate, metal & chrome, glass, porcelain & marble.

Storage:

Shelf Life: 2 years after manufacture when stored between 19 - 30°C.

Directions for Use:

- Safeguard yourself from the mould you are cleaning by wearing appropriate gloves and a mask and goggles.
- Remove wipe from tub and place it on surface you want to clean, and wipe.
- Discard wipe after each use, and frequently if area is very contaminated.
- Repeat as many times as necessary, until the affected surface appears clean.
- Allow the surface to air dry.

Ingredients:

100% plant actives, SAN-AIR is made with a proprietary mix of selected Australian organic essential oils, carefully blended to deliver powerful microbial reduction properties at very low dosage. All of these actives have specific effects on microbial life and strict controls are utilised to maximise their effect whilst safeguarding their relationship with each other.

Validations:

- Actives validated by Eurofins
- Kills 99.99% of fungicidal & sporocidal activity

Independently tested and validated using the highest level of test methodologies currently available.

Benefits:

Long lasting protection.

Once SAN-AIR removes the infestation and the space has been cleaned, SAN-AIR continues working to prevent new infestations from appearing. SAN-AIR Technology offers a complete solution, from the removal of bacteria and mould to continued lasting protection.
